

Do you regularly take opioids? Are you aware of your risk of overdose?

At least three people die each day in Australia from opioid overdose.
Many of these deaths were from unintentional overdoses involving the use of prescription opioids, often in the presence of other substances.
Naloxone temporarily reverses the effect of an opioid overdose!

Naloxone can save your life!

Just by having naloxone in your medicine cabinet, you can prevent a tragedy. Naloxone temporarily reverses the effects of an opioid overdose and can be easily used by anyone.

Naloxone dampens the opioid receptors in the brain. It has no effect on people who are not taking opioids.

Naloxone is now available for free at participating pharmacies and drug and alcohol treatment centres in New South Wales, South Australia and Western Australia.

For more information on how you can access free naloxone visit **www.health.gov.au/naloxone-pilot**

If you would like to be paid to participate in an evaluation relating to the supply of free naloxone contact **naloxone.issr@uq.edu.au**
